GEORGE ARIAS

SUMMARY

I am an optimistic and growth oriented software engineer who views issues in a valued way in that no matter how different or bleak a problem might seem I know a solution can always be found.

My logistics background has taught the value of open communication and common ground with the team you're working with; which is something I excel in nurturing on any team I work with As well as working productively and efficiently to meet a deadline. Of course it has also taught me that such camaraderie in a group may not always be the case yet I have learned the skills to overcome it.

Lately I have been putting all of my time and resources into becoming the best software developer I can be by putting extra time to research a topic or asking someone with more knowledge on a topic. Given my ability to work well with others, a career as a web developer seems like the right fit for me.

EXPERIENCE

Software Engineer, 11/2021 - Current
General Assembly - Chicago, IL

- Wrote, tested and deployed Python and React code, verifying operational and UX integrity for releases.
- Modified internal web tools used in software design processes to streamline operations.
- Developed user interfaces and display formats per customer requests and client-provided parameters.
- Designed user-friendly software interfaces to simplify overall management.
- Collaborated with agile development team to test, develop and maintain web and desktop-based software applications.

Logistic Coordinator, 05/2014 - Current
FedEx - Des Plains, IL

- Relayed information between drivers and recipients regarding ETA and potential delays.
- Logged, processed and followed up on merchandise authorization shipments in databases.
- Loaded, unloaded, moved and sorted materials to keep items flowing to correct locations.
- Coordinated across departments to build successful logistics solutions for our customers.
